

Chemlease® Mould Cleaner

Description:

Chemlease® Mould Cleaner is a special blend of solvents designed to dissolve and remove wax from composite moulds. Ideal for preparing composite mould surfaces for the application of Chemlease® Mould Sealers and Releases. Also excellent for cleaning brushes and equipment.

Application:

1. Chemlease® Mould Cleaner should be applied to the mould surface with clean 100% cotton cloths (we recommend our Chemlease® Cotton Cloth). While the mould surface is still wet, vigorously wipe the mould dry with a second clean, dry 100% cotton cloth.
2. Frequently exchange saturated cloths with new, clean cloths.
3. Repeat process several times until all residue (dirt, dust, grease, moisture, etc.) is removed (at least two cleanings are recommended).
4. The mould is then ready for application of Chemlease® Mould Sealer and/or Chemlease® Mould Release.

Note:

If you plan to use compounds or glazes etc. prior to applying Sealer and/or Mould Release, be sure to follow the compound manufacturer's instructions for cleaning the mould as most require a water wash. This would need to be done prior to application of Chemlease Mould Cleaner.

Handling:

We believe Chemlease® Mould Cleaner has a low degree of hazard when used as intended. For more information, request a copy of Chem-Trend's Material Safety Data Sheet. Storage stability is 3 years.

Packaging:

Chemlease® Mould Cleaner is available in 5 litre containers.
